

Solid Ink Solid Advantage

Cartridge Free

It is easy being green. Welcome to the world of solid ink — a place where bright, vivid colour for the same low cost of black-and-white is just the beginning. It's where all of our colours — cyan, magenta, yellow and black — become green.

And it's all made possible with Xerox solid ink, the office colour solution with a cartridge-free design and minimal packaging. That simple combination means less energy used during manufacturing, drastically reduced landfill waste, and less storage space for better transportation efficiency and far fewer delivery trucks on the road — saving you shipping costs while benefiting the environment.

Now, busy workgroups that use the ColorQube® 8570 printer or Phaser® 8560MFP multifunction printer for their important documents not only gain an edge in today's ultracompetitive business environment, they also get their best work done in a way that's less impactful on the natural environment.

So be green with Xerox solid ink — your easy, responsible, full-colour office document solution.

Solid Ink Products

The ColorQube® 8570 printer delivers brilliant colour and prints up to 40 pages per minute in full colour, with the first-pageout time as fast as five seconds.

The Phaser® 8560 MFP is a reliable colour multi-function device with print, copy, scan, fax and scan to e-mail capabilities.

260 vs. 24 lbs. of waste

Think beyond the ink. The benefits of solid ink go beyond cost and colour quality.

Over the course of printing 144,000 pages, the waste generated by typical cartridge-based toner amounts to an astounding 260 lbs. Xerox solid ink, on the other hand, produces only 24 lbs. of waste — an amazing ratio of more than 10 to 1.

Solid Ink Technology

Introduced more than 15 years ago, Xerox's solid ink technology is an affordable option for businesses looking to add outstanding colour to their documents. The process utilizes solid ink sticks instead of the fluid ink or toner cartridges typically used in printers.

After the ink stick is loaded into the printing device, it is melted and used to produce images on paper in a process very similar to offset printing. Solid ink printers create brilliant prints on a wide range of media in various weights and finishes.
